Table 1. Top 20 terms identified with high confidence as prevalent with IPV in senior population. For each log-odds The confidence levels are abbreviated: H for high, M for medium, and L for low. The terms are sorted in descending order according to the minimum bound LOR_{min}(t, IPV|Senior). All 20 reported terms are identified with high confidence. This indicates that they have higher than average association with IPV in senior population in a statistically significant manner. See Supplementary Data 2 ratio (LOR), the point estimate, 95% augmented confidence interval and the corresponding confidence level are provided respectively. for a full list of terms identified.

| Term Description | LOR(t, IPV Senior) | V Senior) | Z | [umbe | Number of Records | ords |
|---|---------------------|----------------------------------|--------|-------|-------------------|-----------|
| | Raw | Mean Adjusted | BG | IPV | Senior | SeniorIPV |
